Manage tasks and dependencies

1. What is newer than what?

```
$ ls -t *.dat *.svg  
summary-1.dat    figure-1.svg  
$
```

1. What is newer than what?

```
$ ls -t *.dat *.svg  
summary-1.dat    figure-1.svg  
$
```

1. What is newer than what?

```
$ ls -t *.dat *.svg
```

```
summary-1.dat    figure-1.svg
```

```
$
```

Data file is newer than SVG image

1. What is newer than what?

```
$ ls -t *.dat *.svg  
summary-1.dat    figure-1.svg  
$
```

2. Put this in a *Makefile* called hello.mk

```
# hello.mk  
figure-1.svg : summary-1.dat  
    sgr -N -r summary-1.dat > figure-1.svg
```

1. What is newer than what?

```
$ ls -t *.dat *.svg  
summary-1.dat    figure-1.svg  
$
```

2. Put this in a *Makefile* called `hello.mk`

```
# hello.mk          ← Comment  
figure-1.svg : summary-1.dat  
    sgr -N -r summary-1.dat > figure-1.svg
```

1. What is newer than what?

```
$ ls -t *.dat *.svg  
summary-1.dat    figure-1.svg  
$
```

2. Put this in a *Makefile* called `hello.mk`

```
# hello.mk  
figure-1.svg : summary-1.dat  
    sgr -N -r summary-1.dat > figure-1.svg
```

} Rule

1. What is newer than what?

```
$ ls -t *.dat *.svg  
summary-1.dat    figure-1.svg  
$
```

2. Put this in a *Makefile* called hello.mk

```
# hello.mk  
figure-1.svg : summary-1.dat  
    sgr -N -r summary-1.dat > figure-1.svg
```

Target

1. What is newer than what?

```
$ ls -t *.dat *.svg  
summary-1.dat    figure-1.svg  
$
```

2. Put this in a *Makefile* called hello.mk

```
# hello.mk  
figure-1.svg : summary-1.dat  
               sgr -N -r summary-1.dat > figure-1.svg
```

Prerequisite

1. What is newer than what?

```
$ ls -t *.dat *.svg  
summary-1.dat    figure-1.svg  
$
```

2. Put this in a *Makefile* called hello.mk

```
# hello.mk  
figure-1.svg : summary-1.dat  
    sgr -N -r summary-1.dat > figure-1.svg
```

Action

1. What is newer than what?

```
$ ls -t *.dat *.svg  
summary-1.dat    figure-1.svg  
$
```

2. Put this in a *Makefile* called hello.mk

```
# hello.mk  
figure-1.svg : summary-1.dat  
    sgr -N -r summary-1.dat > figure-1.svg
```

Must indent with a single tab character

3. Run GNU Make from the shell

```
$ gmake -f hello.mk
```

3. Run GNU Make from the shell

```
$ gmake -f hello.mk
```

-f filename

3. Run GNU Make from the shell

```
$ gmake -f hello.mk
```

```
sgr -N -r summary-1.dat > figure-1.svg
```

```
$
```

3. Run GNU Make from the shell

```
$ gmake -f hello.mk
```

```
sgr -N -r summary-1.dat > figure-1.svg
```

```
$
```

Prerequisite is newer than target

3. Run GNU Make from the shell

```
$ gmake -f hello.mk
```

```
sgr -N -r summary-1.dat > figure-1.svg
```

```
$
```

Prerequisite is newer than target

So Make executes the action

3. Run GNU Make from the shell

```
$ gmake -f hello.mk  
sgr -N -r summary-1.dat > figure-1.svg  
$
```

4. Run Make again

```
$ gmake -f hello.mk  
$
```

3. Run GNU Make from the shell

```
$ gmake -f hello.mk  
sgr -N -r summary-1.dat > figure-1.svg  
$
```

4. Run Make again

```
$ gmake -f hello.mk  
$
```

Target is newer than prerequisite

3. Run GNU Make from the shell

```
$ gmake -f hello.mk  
sgr -N -r summary-1.dat > figure-1.svg  
$
```

4. Run Make again

```
$ gmake -f hello.mk  
$
```

Target is newer than prerequisite

So action not executed

Usually have multiple rules per file

Usually have multiple rules per file

```
# double.mk
```

```
figure-1.svg : summary-1.dat  
    sgr -N -r summary-1.dat > figure-1.svg
```

```
figure-2.svg : summary-2.dat  
    sgr -N -r summary-2.dat > figure-2.svg
```

Usually have multiple rules per file

```
# double.mk

figure-1.svg : summary-1.dat
    sgr -N -r summary-1.dat > figure-1.svg

figure-2.svg : summary-2.dat
    sgr -N -r summary-2.dat > figure-2.svg
```

Force it to run

```
$ touch *.dat
$
```

Usually have multiple targets per file

```
# double.mk  
  
figure-1.svg : summary-1.dat  
    sgr -N -r summary-1.dat > figure-1.svg  
  
figure-2.svg : summary-2.dat  
    sgr -N -r summary-2.dat > figure-2.svg
```

Force it to run

```
$ touch *.dat ← Update timestamps on files  
$
```

Usually have multiple targets per file

```
# double.mk

figure-1.svg : summary-1.dat
    sgr -N -r summary-1.dat > figure-1.svg

figure-2.svg : summary-2.dat
    sgr -N -r summary-2.dat > figure-2.svg
```

Force it to run

```
$ touch *.dat
$ gmake -f double.mk
sgr -N -r summary-1.dat > figure-1.svg
$
```

Usually have multiple targets per file

```
# double.mk

figure-1.svg : summary-1.dat
    sgr -N -r summary-1.dat > figure-1.svg

figure-2.svg : summary-2.dat
    sgr -N -r summary-2.dat > figure-2.svg
```

Force it to run

```
$ touch *.dat
$ gmake -f double.mk
sgr -N -r summary-1.dat > figure-1.svg
$
```

Why isn't figure-2.svg rebuilt?

First rule in Makefile is *default rule*

First rule in Makefile is *default rule*

Make only does this unless told otherwise

First rule in Makefile is *default rule*

Make only does this unless told otherwise

Force it to rebuild `figure-2.svg` explicitly

First rule in Makefile is *default rule*

Make only does this unless told otherwise

Force it to rebuild figure-2.svg explicitly

```
$ gmake -f double.mk figure-2.svg  
sgr -N -r summary-2.dat > figure-2.svg  
$
```

First rule in Makefile is *default rule*

Make only does this unless told otherwise

Force it to rebuild `figure-2.svg` explicitly

```
$ gmake -f double.mk figure-2.svg  
sgr -N -r summary-2.dat > figure-2.svg  
$
```

Better than typing commands
one by one, but only slightly

Introduce a *phony target*

Introduce a *phony target*

Doesn't correspond to a file

Introduce a *phony target*

Doesn't correspond to a file

So never up to date

Introduce a *phony target*

Doesn't correspond to a file

So never up to date

But things can depend on it

Introduce a *phony target*

Doesn't correspond to a file

So never up to date

But things can depend on it

```
# phony.mk

all : figure-1.svg figure-2.svg

figure-1.svg : summary-1.dat
    sgr -N -r summary-1.dat > figure-1.svg

figure-2.svg : summary-2.dat
    sgr -N -r summary-2.dat > figure-2.svg
```

Introduce a *phony target*

Doesn't correspond to a file

So never up to date

But things can depend on it

```
# phony.mk
```

```
all : figure-1.svg figure-2.svg
```

```
figure-1.svg : summary-1.dat
```

```
    sgr -N -r summary-1.dat > figure-1.svg
```

```
figure-2.svg : summary-2.dat
```

```
    sgr -N -r summary-2.dat > figure-2.svg
```

"make all" rebuilds everything

"make all" rebuilds everything

```
$ touch *.dat
```

```
$ gmake -f phony.mk
```

```
sgr -N -r summary-1.dat > figure-1.svg
```

```
sgr -N -r summary-2.dat > figure-2.svg
```

```
$
```

"make all" rebuilds everything

```
$ touch *.dat
```

```
$ gmake -f phony.mk
```

```
sgr -N -r summary-1.dat > figure-1.svg
```

```
sgr -N -r summary-2.dat > figure-2.svg
```

```
$
```

Order is not guaranteed

"make all" rebuilds everything

```
$ touch *.dat  
$ gmake -f phony.mk  
sgr -N -r summary-1.dat > figure-1.svg  
sgr -N -r summary-2.dat > figure-2.svg  
$
```

Order is not guaranteed

Could re-create figure-2.svg first

"make all" rebuilds everything

```
$ touch *.dat  
$ gmake -f phony.mk  
sgr -N -r summary-1.dat > figure-1.svg  
sgr -N -r summary-2.dat > figure-2.svg  
$
```

Order is not guaranteed

Could re-create figure-2.svg first

Or re-create both in parallel

"make all" rebuilds everything

```
$ touch *.dat
$ gmake -f phony.mk
sgr -N -r summary-1.dat > figure-1.svg
sgr -N -r summary-2.dat > figure-2.svg
$
```

Order is not guaranteed

Could re-create figure-2.svg first

Or re-create both in parallel

Return to that idea later

Things can be both targets and prerequisites

Things can be both targets and prerequisites

A directed graph

Things can be both targets and prerequisites

A directed graph

Must be *acyclic*

Things can be both targets and prerequisites

A directed graph

Must be *acyclic*

Things can be both targets and prerequisites

A directed graph

Must be *acyclic*

```
# multiple.mk
```

```
summary-1.dat : data-1-1.dat data-1-2.dat data-1-3.dat
    stats.py summary-1.dat data-1-1.dat data-1-2.dat data-1-3.dat
```

```
# multiple.mk
```

```
summary-1.dat : data-1-1.dat data-1-2.dat data-1-3.dat
    stats.py summary-1.dat data-1-1.dat data-1-2.dat data-1-3.dat
```

How to generalize to any number of files?

```
# multiple.mk
```

```
summary-1.dat : data-1-1.dat data-1-2.dat data-1-3.dat
    stats.py summary-1.dat data-1-1.dat data-1-2.dat data-1-3.dat
```

How to generalize to any number of files?

And get rid of repeated filenames
